

```
class Student {  
    void result() {  
        System.out.println("Result is not declared yet.");  
    }  
}
```

```
class PassStudent extends Student {  
    @Override  
    void result() {  
        System.out.println("Congratulations! You passed.");  
    }  
}
```

```
class FailStudent extends Student {  
    @Override  
    void result() {  
        System.out.println("Sorry! You failed.");  
    }  
}
```

```
public class ResultExample {  
    public static void main(String[] args) {  
        Student s1 = new PassStudent();  
        Student s2 = new FailStudent();  
  
        s1.result();  
        s2.result();  
    }  
}
```
