

```
class TrainTicket {  
    void bookTicket() {  
        System.out.println("Booking a generic train ticket...");  
    }  
}
```

```
class SleeperTicket extends TrainTicket {  
    @Override  
    void bookTicket() {  
        System.out.println("Booking Sleeper Class Ticket...");  
    }  
}
```

```
class AC3Ticket extends TrainTicket {  
    @Override  
    void bookTicket() {  
        System.out.println("Booking AC 3-Tier Ticket...");  
    }  
}
```

```
public class TrainBookingExample {  
    public static void main(String[] args) {  
        TrainTicket t1 = new SleeperTicket();  
        TrainTicket t2 = new AC3Ticket();  
  
        t1.bookTicket();  
        t2.bookTicket();  
    }  
}
```
